PROFILE

Final-year Pure and Applied Mathematics student and independent Web3 builder — designing, deploying, and shipping full-stack decentralised applications from smart contracts to production frontends. Core focus: AI agent infrastructure, onchain reputation systems, and cross-chain payment protocols. Currently building AgentVault (ERC-8004 reputation-gated AI agent marketplace, live on Arc Testnet) and exploring ZK proof systems and cryptoeconomic mechanism design. 236 GitHub contributions across 6 active repositories; 4 live products shipped.

PROJECTS

AgentVault · Independent · Arc Testnet Mar 2026 – Present

ERC-8004 reputation-gated AI agent marketplace · [agentvault-ecru.vercel.app](#) · [github.com/ajibola-dev/agentvault](#)

- Designed and deployed three smart contracts on Arc Testnet (chain ID 5042002) — **IdentityRegistry**, **ReputationRegistry**, **ValidationRegistry** — implementing ERC-8004 for onchain agent identity and portable reputation (IdentityRegistry: 0x8004A8..., ReputationRegistry: 0x8004B6..., ValidationRegistry: 0x8004Cb...)
- Full-stack in **Next.js 14 App Router + TypeScript** with RainbowKit + wagmi, Supabase Postgres, SIWE auth, actor-based rate limiting, audit logging, and GitHub Actions CI
- Integrated Circle Developer-Controlled Wallets SDK (SCA) for per-task USDC escrow with server-side entity secret cipher generation per serverless invocation; first confirmed onchain escrow payout: **6 USDC on Arc Testnet, April 2026**
- Submitting to Arc Testnet hackathon; 54 commits in April 2026

AgentVault (Solana) · Independent · Colosseum Hackathon Apr 2026 – Present

Solana port of AgentVault using Anchor framework · [github.com/ajibola-dev/agentvault-solana](#)

- Porting AgentVault's agent identity and reputation model to **Solana using Anchor** as a parallel Colosseum hackathon submission
- Exploring cross-chain agent reputation interoperability between EVM (Arc Testnet) and Solana

Intelliwork · Independent · GenLayer Bradbury Testnet Apr 2026 – Present

Autonomous AI-judged work marketplace + onchain dispute court · [github.com/ajibola-dev/intelliwork](#)

- Decentralised marketplace where **Intelligent Contracts** (GenLayer) judge task completion and resolve disputes without human arbiters
- Stack: TypeScript, Next.js, GenLayer SDK; 43 commits in April 2026

Drip · Independent · Arc Testnet Apr 2026

Cross-chain USDC payment protocol · [drip-wine-nine.vercel.app](#) · [github.com/ajibola-dev/drip](#)

- USDC payment links that work across every EVM chain — trustless, feeless, multichain. Think PayPal.me but onchain

- Deployed **USDCPayment** contract on Arc Testnet; bridged USDC from Ethereum Sepolia to Arc via **CCTP v2**; React + Vite + wagmi frontend deployed on Vercel

Alpha Hunter / airdrop-agent · Independent · Railway

Mar 2026

Autonomous Web3 airdrop intelligence system · github.com/ajibola-dev/abdmalik-alpha-hunter · github.com/ajibola-dev/airdrop-agent

- Python bot running 24/7 on Railway — monitors X alpha callers, DeFiLlama funding databases, and GitHub to surface early-stage crypto projects before they go mainstream
- Implemented tech-specific farming templates (FHE, ZK, DePIN, restaking, AI/ML), a watchlist probation tier, and a **Zun Method weighted scoring system (0–10 scale)**

EDUCATION

B.Tech Pure and Applied Mathematics · Ladoke Akintola University of Technology (LAUTECH)2021 –

Present

Ogbomoso, Nigeria · Final Year · Department Class Representative

- **Final Year Project:** A Convex Optimisation Perspective on Mean–Variance Portfolio Modelling: Mathematical Analysis and Computational Experiments — applies optimisation theory to quantitative portfolio construction
- Independent study: ZK proof fundamentals (arithmetic circuits, PLONK, Groth16), cryptoeconomic mechanism design, EVM internals, and formal verification foundations
- Provided LaTeX typesetting and technical document preparation for three B.Tech thesis projects — fluid mechanics (MHD nanofluid flow), epidemiology (SPIRA compartmental model), and numerical analysis (Padé Approximation vs. Taylor Series)

SKILLS

TypeScript · JavaScript · Python · Solidity · Next.js · React · Vite · Tailwind CSS · Node.js · wagmi · viem · RainbowKit · Supabase · Foundry · Hardhat · Anchor · EVM · Solana · Arc Testnet · CCTP v2 · ERC-8004 · Circle SCA · GenLayer · GitHub Actions · Vercel · Railway · WSL/Ubuntu · OpenAI API · AI Agents · LaTeX · Real Analysis · Complex Analysis · Linear Algebra · Abstract Algebra · Functional Analysis · Measure Theory · Convex Optimisation · Operations Research · Numerical Computation · ZK Fundamentals

Languages	TypeScript, JavaScript, Python, Solidity, Rust (learning)
Frontend	Next.js 14 App Router, React, Vite, Tailwind CSS, RainbowKit, wagmi, viem
Blockchain	EVM, Foundry, Anchor (Solana), Arc Testnet, CCTP v2, ERC-8004, Circle SCA, GenLayer SDK
Backend/DB	Node.js, Supabase Postgres, SQLite, REST APIs, SIWE auth, GitHub Actions CI
AI/Agents	OpenAI API, agentic tooling, AI agent architecture, autonomous task validation
Mathematics	Real & Complex analysis, Linear & Abstract algebra, Functional analysis, Measure theory, Probability & Statistics, ODEs & PDEs, Convex optimisation, Operations research, Mathematical modelling, Numerical computation, General topology, ZK fundamentals
Tools	Vercel, Railway, WSL/Ubuntu, Git, Bitwarden, LaTeX

ADDITIONAL

- **Hackathons:** Colosseum (Solana) — AgentVault Solana in progress; Arc Testnet — AgentVault primary submission; all codebases open-source on GitHub
- **GitHub Pro** — 236 contributions in the past year across 6 active repositories

- Security hygiene: Bitwarden credential management, scoped Personal Access Tokens, no `.env` files committed to version control
